

Mexican gas energy storage

Could Trump use Mexico's reliance on US gas as leverage?

Mexico's government is looking to speed up plans to double its strategic natural gas storage capacity amid concern that U.S. President Donald Trump could use the country's dependence on U.S. gas as some form of leverage, three sources familiar with the matter said.

Does Mexico have a gas export terminal?

And Mexico Is Key. By next year, American natural gas will start flowing across Mexico to a major export terminal on the Pacific, reflecting a global energy landscape transformed by U.S. dominance in gas. This facility in Mexico was originally designed for importing gas. But now, as American output soars, it's transforming into an export terminal.

Are Mexico's gas terminals really American?

But analysts say that these terminals are essentially American ones: They are mostly owned, operated and supplied by U.S. gas companies. "Any expansion in Mexico is tantamount to an expansion in the U.S.," said Gregor Clark, who researches energy projects across the Americas for Global Energy Monitor.
