

Overseas energy storage project energy storage appearance

How can energy storage support the global transition to clean electricity?

To support the global transition to clean electricity, funding for development of energy storage projects is required. Pumped hydro, batteries, hydrogen, and thermal storage are a few of the technologies currently in the spotlight.

What will the energy storage industry look like in East Asia & Pacific?

Additionally, in many of these areas the industry is likely to adopt a more distributed approach to grid development, using more local power generation and microgrid systems. We expect that the largest energy storage market in the East Asia & Pacific region will be China.

How many energy storage projects are there in the world?

It has 9.4GW of energy storage to its name with more than 225 energy storage projects scattered across the globe, operating in 47 markets. It also operates 24.1GW of AI-optimised renewables and storage, applied in some of the most demanding industrial applications.

Why is 2024 a good year for energy storage?

2024 is the start of energy storage in the Middle East and Africa, with 2.7 GWh of capacity. Key points: Tender projects surged, exceeding 40 GWh, mainly from the UAE and Saudi Arabia. China-funded companies led, winning most announced projects. Intense competition lowered bid prices compared to other regions.

Is China entering a new era of energy storage demand?

Mainland China accounts for most of the global energy storage demand, driven in the near term by regional requirements for new utility-scale wind and solar projects to include energy storage capacity. However, the Chinese market is entering an era of change.

Where will the new energy storage capacity be deployed?

As shown in Chart 3.8, a significant portion of the new energy storage capacity expected to be deployed in Latin America and the Caribbean will likely come from remote power systems. Most of this new capacity is anticipated to be in physical island microgrid systems.
