

Permanent magnetic switch does not store energy

What happens if a magnet is permanent?

If a magnet is permanent it can attract some materials permanently. Attracting something involves energy. If a permanent magnet can do this forever, from where does this energy come from? How can it not run out of energy? Doesn't it contradict with the laws of energy? possible duplicate of Conservation of Energy in a magnet.

Can permanent magnets be assumed as a source of energy?

Then by subjecting the magnet into a high electromagnetic fields the magnet becomes permanent magnet. Correct? Also, according to my findings on the web everyone says that the permanent magnets cannot be assumed as a source of energy, and my question is why?

Can a permanent magnet move?

The permanent magnet is placed in a fixed place and will not move, and its own magnetic field will not change, so the energy does not come from this permanent magnet.

Do you have a doubt about permanent magnets?

I have a doubt about permanent magnets. If a magnet is permanent it can attract some materials permanently. Attracting something involves energy. If a permanent magnet can do this forever, from where does this energy come from?

Can we maintain a magnetic field from a permanent magnet?

Yes we can. There is no energy involved in maintaining a magnetic field from a permanent magnet. The reason is because the magnetic field comes from the intrinsic spin of the electrons in the atoms of the metal. It requires no expenditure of energy to function.

How does a permanent magnet work?

$U = -m \cdot B$ $U = m \rightarrow B \rightarrow$ By clicking "Post Your Answer", you agree to our terms of service and acknowledge you have read our privacy policy. When a permanent magnet attracts some object, lets say a steel ball, energy is converted into for instance kinetic energy and heat when attraction happens, and they eventually collide.
