

Poly group energy storage

Who is poly energy?

Poly Energy is built on a decade of deep research expertise in polymer electrolytes and solid-state battery design. Our founding team includes leading scientists and engineers from HKUST with more than 10 years of experience in COF-based and polymer-based materials.

How long has the PSC been working on an energy storage plan?

Efforts towards a finalized implementation plan have been ongoing since June 2024, when Governor Hochul first announced that the PSC had approved an Energy Storage Roadmap in furtherance of the state's goal to achieve six gigawatts ("GWs") of energy storage by 2030.

Should energy storage be included in the electric grid?

Integrating storage in the electric grid, especially in areas with high energy demand, will allow clean energy to be available when and where it is most needed. As New York continues to invest and build a cleaner grid, energy storage will allow us to use existing resources more efficiently and phase out the dirtiest power plants.

Why is energy storage important?

Energy storage is essential for creating a cleaner, more efficient, and resilient electric grid. Additionally, these projects will provide meaningful benefits to Disadvantaged Communities and Low-to-Moderate Income New Yorkers. Energy storage is essential to a resilient grid and clean energy system.

How many energy storage projects does Engie have in North America?

Today, ENGIE has 3 grid-scale energy storage projects in North America with the capacity to deliver 520 MW of power to the grid and another 2 GW under construction. These projects support the growing demand for renewable energy and enable greater reliability and resilience on power grids, while enabling the net zero energy transition.

Will energy storage grow in 2023?

Global energy storage's record additions in 2023 will be followed by a 27% compound annual growth rate to 2030, with annual additions reaching 110GW/372GWh, or 2.6 times expected 2023 gigawatt installations. Targets and subsidies are translating into project development and power market reforms that favor energy storage.
