

Profit analysis of lithium battery superposition energy storage

Does a grid-level battery energy storage system perform energy arbitrage?

The present work proposes a long-term techno-economic profitability analysis considering the net profit stream of a grid-level battery energy storage system (BESS) performing energy arbitrage as a grid service.

Are lithium-ion battery energy storage systems effective?

As increasement of the clean energy capacity, lithium-ion battery energy storage systems (BESS) play a crucial role in addressing the volatility of renewable energy sources. However, the efficient operation of these systems relies on optimized system topology, effective power allocation strategies, and accurate state of charge (SOC) estimation.

What are the advantages and disadvantages of lithium ion battery (LIB)?

As shown in Table 1, LIB offers advantages in terms of energy efficiency, energy density, and technological maturity, making them widely used as portable batteries. The limited availability of lithium resources, along with the environmental impacts associated with the production and recycling of LIB, pose significant challenges to its development.

How can energy storage technologies be analyzed for maximum profitability?

Based on the above arbitrage revenue and capacity costs, the potential selections of energy storage technologies can be analyzed in more detail for maximum profitability once breakeven costs are achieved via attainment of technology readiness and/or system cost reductions.

Are emerging energy storage technologies profitable?

Emerging storage technologies like LIB and RFB are less constrained by geography but are expensive, leading to poor profitability in energy storage applications. The technical and economic analysis of EST has attracted significant attention.

Are battery energy storage systems economically feasible?

Battery Energy Storage Systems (BESS) will play a vital role in achieving the energy objectives of the European Union (EU), although there is a lot of skepticism regarding the economic feasibility of BESS systems.
