

Pumped energy storage power station operation equipment manufacturing

What is pumped storage power station (PSPS)?

The pumped storage power station (PSPS) is a special power source that has flexible operation modes and multiple functions. With the rapid economic development in China, the energy demand and the peak-valley load difference of the power grid are continuing to increase.

What is pumped storage hydropower (PSH)?

As the power system undergoes rapid changes, pumped storage hydropower (PSH) is an important energy storage technology that has significant capabilities to support high penetrations of variable renewable energy (VRE) resources.

What is pumped Energy Storage?

The PSPS is the best tool for energy storage. The pumped storage has the function of energy reserve, and it solves the problem of electricity production and consumption at the same time, and not easy to store. Thus, it can effectively regulate the dynamic balance of the power systems in electricity generation and utilization.

What are pumped storage power plants?

One of the primary tasks of pumped storage power plants in this era of rapidly growing but less predictable renewable energy sources like wind and solar energy is not only to provide energy storage capabilities, but also to contribute to the stabilization of the electrical grid.

What is the current state of pumped storage hydropower technology?

Although pumped storage hydropower (PSH) has been around for many years, the technology is still evolving. At present, many new PSH concepts and technologies are being proposed or actively researched. This study performs a landscape analysis to establish the current state of PSH technology and identify promising new concepts and innovations.

How to optimize pumped-storage power station operation?

Propose a novel optimization framework of pumped-storage power station operation. Optimize pumped-storage power station operation considering renewable energy inputs. GOA optimizes peak-shaving and valley-filling operation of pumped-storage power station. Promote synergies of hydropower output, power benefit, and CO₂ emission reduction.
