Is RWE building a battery storage plant in Germany?

RWE is planning, building and operating innovative combined solar and storage plants in its German opencast mining sites. In addition, the company has won the bid for a long-duration battery storage system (50 megawatts / 400 MWh) in Australia. Construction work on RWE's largest battery storage project in Germany to date is making swift progress.

What is RWE's largest battery storage project in Germany?

Construction work on RWE's largest battery storage project in Germany to date is making swift progress. With 690 battery blocks, a storage capacity of 235 megawatt hours and an output of 220 megawatts (MW), RWE Generation is building one of the largest battery storage systems in Germany.

Where is RWE storing lithium-ion batteries?

RWE commissioned a large-scale storage facility in December 2024 and February 2025 in North Rhine-Westphalia. A total of 690 blocks of lithium-ion batteries were installed at the Neurath and Hamm sites. By opting for the sites of its existing power plants, RWE is able to take advantage of the synergy of combined technologies.

How much is RWE investing in a battery storage system?

RWE is investing a mid three-digit million euro sum for the construction. The systems can generate their maximum output for up to two hours at a time. Together with the battery storage system that went into operation in February, the site in Hamm will have a storage capacity of 1.35 gigawatt hours in future.

Why should you choose RWE for a battery storage project?

RWE is benefiting from many years of expertise in the energy storage sector. The company has the capability to provide detailed planning, modelling as well as system integration and commissioning of the project in-house and under one roof. Battery.storage@RWE

What is the largest European battery-based energy storage project?

In May 2023, we launched our largest European battery-based energy storage project at the Antwerp platform in Belgium. With its 40 containers, the site will develop a capacity of 75 MWh, which is equivalent to the daily consumption of almost 10,000 homes.
