

How to create a shared energy storage community?

Community setup The first step to have shared energy storage is to form communities which are built by using the k -means approach. The geographical locations (longitude and latitude) are used to cluster the households. In this case, $K = 3$ is used to form three communities due to the distance limitation of CES and the road intersection.

Do households own energy storage and not share energy resources?

In this part, we consider the case where households own individual energy storage and do not share these resources, i.e., own PESs. The first observation is that when households install PV systems and PESs, the flexibility of controlling their demand is much higher and thus the aggregator's electricity cost can decrease significantly.

Should community energy storage be used instead of private energy storage?

Computational results are presented on two real use cases in the cities of Ennis, Ireland and Waterloo, Canada, to show the advantage of using community energy storage as opposed to private energy storage and to evaluate the cost savings which can facilitate future deployment of community energy storage.

What are the allocation options of energy storage?

The allocation options of energy storage include private energy storage and three options of community energy storage: random, diverse, and homogeneous allocation.

Does energy storage play a significant role in smart grids and energy systems?

Abstract: Energy storage (ES) plays a significant role in modern smart grids and energy systems. To facilitate and improve the utilization of ES, appropriate system design and operational strategies should be adopted.

How does the allocation scheme affect the fairness of energy storage?

In addition to reducing costs, the second main insight is related to the variation in the power consumption profiles of the households which leads to different utilization of the energy storage based on the allocation scheme and results in different levels of charging and discharging which impacts fairness.
