

Small energy storage power station construction plan

How to promote the construction of pumped storage power stations?

To promote the construction of pumped storage power stations, it is of great significance for the construction and optimization of modern power systems. 2. Development trends of pumped storage energy in China To effectively support the construction and development of pumped storage power stations, China has issued a series of supporting policies.

Why are small and medium-sized pumped storage power stations important?

Small and medium-sized pumped storage power stations have unique development advantages, and the development and construction of small and medium-sized pumped storage power stations have important practical significance for optimizing the energy structure of Zhejiang Province.

What is a pumped storage power station?

Pumped storage power station is a kind of hydropower station with energy storage function. It uses surplus electricity during periods of low power demand to pump water from a lower reservoir to a higher one.

What is the control scheme of a pumped storage power station?

The control scheme is one of the core technologies of small and medium-sized pumped storage power stations. The medium and small pumped storage power station can control energy storage and discharge by adjusting the difference of water level in the reservoir.

Do pumped storage power stations need a lot of land?

The construction of pumped storage power stations requires a large amount of land, including the construction of upper and lower reservoirs, which may change the local land use pattern and cause interference with the original ecosystem.

What pumped storage power stations ushered in a new peak?

During the "Twelfth Five-Year Plan" and "Thirteenth Five-Year Plan" periods, to adapt to the rapid development of new energy and UHV power grids, pumped storage power stations such as Fengning in Hebei Province and Jixi in Anhui Province ushered in a new peak.
