

Solar Inverter cost vs benefit calculation in Norway

How will solar energy impact Norway?

Together with wind, solar energy will account for most of the replacement of fossil fuels. Norway is closely linked to the European energy market. Regardless of the growth of solar in Norway, the development in the EU will have consequences for Norwegians.

Is solar power a viable option in Norway?

Norwegian hydropower is currently so cheap that power companies do not consider it attractive to build solar power plants in Norway. In recent years, however, companies have started selling or leasing solar systems to private customers and businesses in Norway. Despite the low energy prices, solar power is growing rapidly in Norway.

Is solar PV a good option for the future Norwegian power market?

Solar PV has an average market value as low as 20 ± 3 EUR/MWh. Despite low LCOE estimates, solar PV does not look like an attractive option for the future Norwegian power market, given our model assumptions.

How does solar power work in Norway?

Solar power is only produced during the day, thus it must either be used immediately, stored or sold via the central electricity grid. In Norway, production of solar energy can offload the tapping of water reservoirs. Smart grids and digitization: Most Norwegian households will soon be equipped with smart meters.

Will fossil fuel costs affect electricity prices in Norway in 2040?

Electricity prices remain strongly affected by fossil fuel costs to 2040. The 2040 power price in Norway is modelled to be 39 ± 4 EUR/MWh. Market value of Norwegian hydropower is 34% higher than the average power price. Seasonal patterns for solar PV give <3% probability of revenues higher than the LCOE.

Is solar energy a viable option in Denmark?

The government supports solar PV installations through net metering schemes and tax exemptions, making solar energy a viable and attractive option. Denmark's commitment to integrated energy systems and smart grid technologies further enhances the potential of solar PV, integrating it seamlessly into the national energy mix.

The electric utility industry typically refers to PV CAPEX in units of \$/kW AC based on the aggregated inverter capacity; starting with the 2020 ATB, we use \$/kW AC for utility-scale PV. Plant costs are represented with a single estimate ...
