

# Solar battery charger circuit diagram

What is a simple solar charger circuit?

Simple solar charger circuits are small devices which allow you to charge a battery quickly and cheaply, through solar panels. What is Maximum Power Point Solar Tracking? A simple solar charger circuit must have 3 basic features built-in: It should be low cost. Layman friendly, and easy to build.

How to charge a 12V battery from a solar panel?

Here is the simple circuit to charge 12V, 1.3Ah rechargeable Lead-acid battery from the solar panel. This solar charger has current and voltage regulation and also has over voltage cut off facilities. This circuit may also be used to charge any battery at constant voltage because output voltage is adjustable.

How solar battery charger works?

Solar battery charger operated on the principle that the charge control circuit will produce the constant voltage. The charging current passes to LM317 voltage regulator through the diode D1. The output voltage and current are regulated by adjusting the adjust pin of LM317 voltage regulator. Battery is charged using the same current.

What is the output voltage of solar battery charger?

Output Voltage -Variable (5V - 14V). Maximum output current - 0.29 Amps. Drop out voltage- 2- 2.75V. Solar battery charger operated on the principle that the charge control circuit will produce the constant voltage. The charging current passes to LM317 voltage regulator through the diode D1.

How do you charge a solar panel without a battery?

Place the solar panel in sunlight. Check the battery voltage using digital multi meter. Circuit is simple and inexpensive. Circuit uses commonly available components. Zero battery discharge when no sunlight on the solar panel. This circuit is used to charge Lead-Acid or Ni-Cd batteries using solar energy.

How to create a solar battery charger?

So, let's dive into the world of renewable energy and learn how to create a solar battery charger! To build the solar battery charger, you must first connect the LM317 voltage regulator IC and the BC547 transistor with the help of resistors and capacitors. Then, connect the LED indicators and the voltage comparators using the LM324 quad op-amp.

And now we come to making your own battery charger. Below is the circuit diagram for it. The solar cells positive terminal is connected through the diode to the positive terminal of the 1.2V battery. If the voltage of the solar cell drops ...
