

Solar battery charger instructions

How do I charge a solar battery?

For proper temperature compensated battery charging the ambient temperature of the solar charger and the battery must be within 5°C (9°F). The battery and PV connections must be guarded against inadvertent contact. Install the solar charger in an enclosure or install the optional WireBox .

How do I set up a solar charger?

The solar charger's data can be read out and setting configurations can be made using the VictronConnect or the optional display. The solar charger will commence battery charging as soon as the PV voltage is 5V higher than the battery voltage. For charging to continue, the PV voltage must remain at least 1V higher than the battery voltage.

Can a solar charger charge a battery?

The DC (PV) input is not isolated from the battery circuit. Therefore the PV, battery and control circuit are considered hazardous and should not be user accessible. For proper temperature compensated battery charging the ambient temperature of the solar charger and the battery must be within 5°C (9°F).

How do I set the battery voltage on my MPPT solar charger?

MPPT solar charger manual Page 43 Troubleshooting and Support shading blog story The "battery voltage" setting is listed at the top of the battery settings menu. Depending on controller model 12, 24, 36 or 48V can be selected.

When does a solar charger start battery charging?

The solar charger will commence battery charging as soon as the PV voltage is 5V higher than the battery voltage. For charging to continue, the PV voltage must remain at least 1V higher than the battery voltage. 6.2. Battery charging

How do I set a solar charger to 0% duty cycle?

o Light dimming (PWM inverted): Use this function in combination with the "Streetlight" setting. The TX port PWM* signal will be at 0% duty cycle when full light intensity is required. o Virtual load output: Use this function to create a virtual load output if the solar charger does not have a physical load output.
