

# Solar battery types comparison

What are the different types of solar batteries?

Solar batteries can be divided into six categories based on their chemical composition: Lithium-ion, lithium iron phosphate (LFP), lead-acid, flow, saltwater, and nickel-cadmium. Frankly, the first three categories (lithium-ion, LFP, and lead-acid) make up a vast majority of the solar batteries available to homeowners.

Which battery is best for solar energy storage?

Lithium-ion- particularly lithium iron phosphate (LFP) - batteries are considered the best type of batteries for residential solar energy storage currently on the market. However, if flow and saltwater batteries became compact and cost-effective enough for home use, they may likely replace lithium-ion as the best solar batteries.

What types of batteries are available?

The tables include the most popular high-voltage and low-voltage (48V) DC-coupled batteries of the managed variety, plus self-managed lithium batteries for hybrid energy storage or stand-alone (off-grid) power systems. See our comprehensive home solar battery review for more details about lithium battery types and costs.

What is the best solar battery?

However, if flow and saltwater batteries became compact and cost-effective enough for home use, they may likely replace lithium-ion as the best solar batteries. Regardless of the chemistry, the best solar battery is the one that empowers you to achieve your energy goals.

What type of battery should a solar system use?

Lithium-ion batteries are the most common type of battery used in residential solar systems, followed by lithium iron phosphate (LFP) and lead acid. Lithium-ion and LFP batteries last longer, require no maintenance, and boast a deeper depth of discharge (80-100%).

What are the different types of rechargeable solar batteries?

The six types of rechargeable solar batteries include lithium-ion, lithium iron phosphate (LFP), lead acid, flow, saltwater, and nickel-cadmium.
