

Solar quotes battery calculator

What is a solar battery calculator?

This solar battery calculator is indicative only. It is provided to give an estimate only and general guide of the potential savings, costs and benefits of installing a solar battery. You can read the full calculator disclaimer [here](#). How it works? If you don't know the answer, use the default input.

How do I get a price estimate for a solar system?

Use the simple Solar Calculator to get an instant price estimate for solar and batteries. It is important to note, that you neither want to pay too much nor too little for a solar system. It might sound strange that you would not want to pay too little but think about it as if you were going out to dinner.

How do I calculate my solar Bill?

There is nothing to calculate. Please add at least one new solar array or add a battery. This is how much you pay for every kilowatt-hour (kWh) of electricity you use from the grid. The solar calculator uses typical electricity costs for your area - but you can see what you actually pay on your bill. If you get quarterly bills - this is 4 bills.

What is the solar battery Payback and efficiency calculator?

The Solar Battery Payback and Efficiency Calculator serves as a tool for individuals and businesses looking to assess the viability and return on investment of solar battery systems. This calculator helps you determine how long it will take to recoup your initial investment and evaluates the efficiency of your solar setup.

How do I use the solar calculator?

The solar calculator uses a realistic value for your area as a default. At a minimum, simply enter your postcode and the solar system size you are considering into the calculator. Then enter your typical annual electricity bill (a guess is fine!). You can leave all the other inputs as their default values and hit 'calculate'.

Is a solar battery a viable investment?

The financial viability of the battery will depend on your individual circumstances, for example: the size and generation capacity of your current solar system, the amount of electricity you use and your usage habits during daylight hours. The Australian population uses more electricity during the peak morning and evening periods.
