

# Solid state battery reddit

Are solid-state batteries the next big thing?

Simon Erhard, one of BMW's top engineers, has described solid-state batteries as the next big thing in battery development. He recently claimed that lithium-ion batteries had 'peaked' in terms of performance, predicting that solid-state batteries would eventually replace them as the industry standard.

Are solid-state batteries the future of battery technology?

Solid electrolytes are inflammable and the chances of explosions are negligible. So, solid-state batteries are the future solutions for battery technology in consumer electronics and electric vehicles. Is the concept of solid-state batteries feasible? Yes, the work on solid-state batteries has been going around for more than a century.

Are solid-state batteries the next big thing for EV batteries?

Claims of higher energy density, much faster recharging, and better safety are why solid-state-battery technology appears to be the next big thing for EV batteries. Solid-state cells promise faster recharging, better safety, and higher energy density. They replace the liquid electrolyte in today's lithium-ion cells with a solid separator.

What is a solid state battery?

Solid state batteries consist of a cathode and an anode that are separated by an electrolyte medium that allows the charged ions to travel through them. Lithium cobalt manganese oxide is used as a cathode and a lithium metal layer as the anode. Solid electrolytes used are in the form of ceramics, glass, sulfides, or solid polymers. [Read more.](#)

Will solid-state batteries go on sale before 2030?

Honda, Toyota, and others hope to use solid-state cells in vehicles to go on sale before 2030. Advances in battery technology--for consumer electronics and electric vehicles alike--are largely incremental, and have been since the advent of modern lithium-ion cells almost 30 years ago.

Are solid-state cells the next big battery advance?

The next big battery advance may be solid-state cells, long a Holy Grail for battery engineers all over the world. They offer the lure of greater energy density, faster recharging, and better safety than cells with liquid electrolytes.

If you can increase battery voltage and make more power on the hardware that was there (first upgrade everyone does to Sur Ron is battery swap), I would argue that the battery is part of the engine, albeit one that is always in a solid state ...

The new Talian solid state cells hit 720Wh/kg, so if an unnamed NIO EV can do over 620 miles with

## Solid state battery reddit

360Wh/kg cells it could have double the capacity in a pack of the same weight. They're also claiming to have overcome some of the power ...

It's always a couple years away... It's vaporware so their stock doesn't tank. Remember the Tokyo Olympics. Toyota will use Tokyo Olympics to debut solid-state battery electric vehicle. October 2019 It's over halfway through 2023 and ...
