

# South american lithium iron phosphate energy storage module company

Where is South American lithium located?

Located in the heart of the lithium triangle South American Lithium owns 50,000+hectares throughout the El Quemado mining district. The El Quemado project is within one of the finest spodumenic areas in all of Argentina where the potential for mineralization of lithium, columbite-tantalite and rare earth minerals is outstanding. What Is Lithium?

What is a lithium ion battery?

LITHIUM-ION A perfect combination of high energy density (e.g. NCM&NCA technology), safety (PTC device) and long-life shows what is possible with Lithium-Ion battery technology from Haidi Energy. Excellent battery safety on one hand, and superior battery performance on the other: this is what Haidi stands for.

Why is Sali lithium a good investment?

SALi Lithium Corp's access to these water sources ensures that the project is well-positioned to support future extraction activities, contributing to the region's growing lithium industry. The Huaytiquina Project benefits from its proximity to two important aquifer systems: the Catua Aquifer System and the Volcanic Aquifer Complex.

Are Haidi lithium iron phosphate cells incombustible?

Haidi Lithium Iron Phosphate cells are incombustible in the event of mishandling during charge or discharge, they are more stable under overcharge or short circuit conditions and they can withstand high temperatures without decomposing. When abuse does occur, the phosphate based cathode material will not burn and is not prone to thermal runaway.

Is lithium a good material for a rechargeable battery?

Lithium is the lightest metal and least dense solid element. Its high electrochemical potential makes it an extremely valuable component of high energy-density rechargeable batteries. El Quemado has tenements covering 50,000 hectares in the South America region, prospective for lithium mineralization.
