

# Successful bid price of office building energy storage project in Estonia 2030

How much energy will Estonia consume in 2030?

Under the NEDP 2030, expected primary energy consumption in 2030 will be 10% less than in 2012<sup>14</sup>, final energy consumption will be 32 TWh (115 PJ) and the energy intensity of the Estonian economy will be 2 MWh/1000 EUR GDP<sub>2012</sub>

Do planned electricity infrastructure measures affect energy exchange prices in Estonia?

At the same time electricity exchange price in Estonia was substantially the same as in Finland (33.2 EUR/MWh)<sup>130</sup>. Hence the planned electricity infrastructure measures have a positive impact on the exchange prices of energy as well as the market integration. iii. Where relevant, impacts on regional cooperation 130 Nord Pool Spot.

Can a flexible collaboration mechanism increase Estonia's electricity consumption?

The elements set out in point (a)(2) of Article 4 If flexible collaboration mechanisms with other EU Member States are launched successfully, it could be possible to increase the share of electricity from renewable energy sources in Estonia's final electricity consumption to 50%. Figure 1 Figure 1.
