

# Successful bid price of solar with battery project in China 2026

Will new power pricing measures in China lead to higher solar prices?

Analysis by S&P Global suggests new power pricing measures in China could bring a rush of new installations in the country during the first half of the year and lead to an increase in solar module prices first domestically, then internationally.

Will solar module prices rise if demand increases in China?

S&P Global's analysis suggests that due to the size of China's solar market, a domestic increase in module prices could also lead to a global rise. "Solar module prices are most likely to get the chance to rebound once demand increases," explained Jessica Jin, principal research analyst of Clean Energy Technology at Commodity Insights.

How much does a Chinese company bid?

The average bid of the first six candidates was 0.4730 yuan/Wh, while the bids of the three alternative companies were somewhat higher and stood at 0.4738 yuan/Wh, 0.486 yuan/Wh and 0.4784 yuan/Wh. The latest results follow in the footsteps of recent procurements which saw similarly low prices.

How much does a solar system cost?

Bids averaged \$66.3/kWh, with 60 bids under \$68.4/kWh. The tender, covering supply, system design, installation guidance, 20-year maintenance, and safety features, targets systems to be built in 2025-2026.

Could a new power pricing mechanism strengthen short-term solar module demand?

A new power pricing mechanism in China could strengthen short-term solar module demand both domestically and internationally, according to analysis by S&P Global.

What will happen if a PV power plant loses a fixed feed-in tariff?

The document set 1 June 2025 as a policy turning point; after this date, new projects will fully implement market-oriented bidding, and PV power plants that lose the guarantee of fixed feed-in tariff will have to face the risks of uncertain returns.

The prices for wind and solar power are only a fraction of the wholesale cost of electricity, weekly average forward delivery contracts having ranged between \$163.61 and \$163.87 per megawatt-hour this year. Further underlining the value of ...
