

Are magnesium-based energy materials sustainable?

Magnesium-based energy materials, which combine promising energy-related functional properties with low cost, environmental compatibility and high availability, have been regarded as fascinating candidates for sustainable energy conversion and storage.

What is EBRD doing with Tashkent solar PV & energy storage?

Nandita Parshad, Managing Director, Sustainable Infrastructure Group at EBRD, said: "We are proud to partner with ACWA Power and co-financiers on the pioneering Tashkent Solar PV and energy storage project in Uzbekistan, the largest of its kind in Central Asia. The project is core to Uzbekistan's ambition to install 25GW of renewables by 2030.

Are magnesium-based hydrogen storage materials effective?

Mg-based hydrogen storage materials have attracted considerable attention due to their high hydrogen storage capacity and low cost. In order to further improve their performance, researchers have focused on the effects of catalyst addition and composite systems on the hydrogen storage properties of magnesium-based materials.

Are magnesium based materials better than solid-state hydrogen-storage materials?

Magnesium (Mg)-based materials exhibit higher hydrogen-storage density among solid-state hydrogen-storage materials (HSMs). Highly reliable hydrolysis can be achieved using them for hydrogen production. They can also achieve the integration of hydrogen production and storage via the regeneration.

What challenges do magnesium-based hydrogen storage materials face?

However, magnesium-based hydrogen storage materials also face challenges such as high operating temperature and sluggish reaction kinetics, which have impeded their potential applications ,,,

Can magnesium based hydrogen storage materials be electrochemically synthesised?

Electrochemical deposition To date only a few groups have reported on the electrochemical synthesis of magnesium-based hydrogen storage materials ,,owing to the low reduction potential of the  $Mg^{2+}/Mg$  couple (Table 9) and the difficulty of reducing magnesium salts by electrochemical means.
