Are vanadium redox flow batteries a viable energy storage option?

With a plethora of available BESS technologies, vanadium redox flow batteries (VRFB) are a promising energy storage candidate. However, the main drawback for VRFB is the low power per area of the cell. In this project we will address the mechanism of VRFB operation at both molecular and device levels.

What is a vanadium redox flow battery (VRFB)?

Among these batteries, the vanadium redox flow battery (VRFB) is considered to be an effective solution in stabilising the output power of intermittent RES and maintaining the reliability of power grids by large-scale, long-term energy storage capability .

Can vanadium redox flow battery be used for grid connected microgrid energy management?

Jongwoo Choi, Wan-Ki Park, Il-Woo Lee, Application of vanadium redox flow battery to grid connected microgrid Energy Management, in: 2016 IEEE International Conference on Renewable Energy Research and Applications (ICRERA), 2016. Energy Convers.

Can vanadium electrolyte be recycled?

In parallel, vanadium electrolyte can be 100% recycled. Existing VRFB still have a low energy density. Our collaborative project is focused on this problem. The rate capabilities of VRFB are limited by the slow kinetics of posolyte reaction because of its complex mechanism.

Can large-scale battery energy storage systems reduce congestion in storage-as-transmission?

Here, large-scale battery energy storage systems (BESS) can be used for buffering loads at strategic network nodes to alleviate congestion in storage-as-transmission. With a plethora of available BESS technologies, vanadium redox flow batteries (VRFB) are a promising energy storage candidate.

What are the advantages of a vanadium electrolyte?

1. Long life-cycle up to 20-30 years.
2. Flexibility in regulating the output power by increasing the size of electrodes or using more active vanadium species .
3. Unlimited capacity associated with the volume of the electrolyte.
4. High efficiency (up to 90% in laboratory scale, normally 70%-90% in actual operation) .
