What is a portable solar power system?

A portable power system -- aka solar generator, solar power station, portable power bank or battery box -- stores energy to be used at a later time. Depending on the model, it can be charged via solar panels, wind generators, a 120-volt household plug or a 12-volt car outlet. The phrase "portable solar power systems" is a misnomer.

What is a portable solar power station?

Portable solar power stations can generally be classified by capacity, battery type and inverter. Watt hours indicate how much energy a battery can store. So if a power station contains 100Wh of energy, that means it can put out 100 watts for one hour or 10 watts for 10 hours.

How much power can a portable power station hold?

While a particular power station might claim to hold 1,000 watt hours, the actual amount of usable power you can get out of it is a different story. The best portable power stations also have an onboard computer that shows you how much energy is left in your unit, as well as how much power it's currently using.

Why is mobile energy storage a stranded asset?

Stationary storage lacks flexibility, suffers from low utilization and from the risk of becoming a stranded asset. Power Edison addressed these issues by developing mobile energy storage platforms: TerraCharge(TM) and AquaCharge(TM) for mobile land-based and water-based mobile energy storage respectively.
