

When will solar batteries be affordable

How much does a solar battery cost?

To give an idea of cost, around this time a battery with one kilowatt-hour (kWh) capacity cost approximately \$7,500 USD. Nowadays, a battery with the same capacity can have a 90% lower cost. That's a huge price decrease in the short span of 30 years. Will solar batteries continue to decrease in price?

Should you buy a solar battery?

With the continual decline of solar feed-in tariffs, solar batteries are the best option to take advantage of extra solar generation. With a battery, you can also join virtual power plants (VPPs) and earn more money on your investment. What affects the cost of a solar battery? A range of different elements affect the total cost of a solar battery.

Is solar battery storage worth the cost in 2025?

Whether solar battery storage is worth the cost in 2025 is totally up to you and your energy goals. If you experience frequent or long-lasting power outages, then having battery storage for backup power can be a game-changer in keeping you safe, productive, and comfortable (not to mention keeping your food from spoiling!).

Are solar batteries worth the price tag?

Solar batteries are worth their price tag. While projections show that solar battery prices are expected to drop, waiting means missing out on savings. Solar batteries have the potential to save you money as soon as they are installed and operational.

How have solar battery prices changed over the last 5 years?

Solar battery prices have remained relatively stable in the last five years. Despite slight increases and decreases, prices have averaged out over this time period. One thing worth noting is that inflation rates have risen significantly in Australia within the last five years.

Can a solar battery save you money?

A solar battery will reduce your reliance on the grid and make a big difference to your energy bills, without you having to lift a finger. But if you want to be even more savvy with your energy, you can switch tariffs and use your battery to load shift so you only buy energy from the grid when your tariff is at its lowest.

By Mustafa Kaka (Economist) and Russell Pendlebury (Economics Director) Falling battery installation costs, longer warranty periods, and a greater incentive to store and utilise energy from a home installed battery mean that between ...
