

# Why do solar lights need rechargeable batteries

Do solar lights need rechargeable batteries?

You need rechargeable batteries in your solar lights, as the solar panel converts the sunlight into power to charge the batteries, which power the light. Almost all garden solar lights use low-capacity rechargeable batteries. More recently, solar lights will use 1.2V NiMH (Nickel Metal Hydride) batteries.

Do solar lights need a power source?

To store energy, your solar-powered lights need rechargeable batteries. So, when it's time for them to light up your garden, patio, or entrance, they will shine by consuming the energy stored in the batteries. Therefore, solar panels cannot generate the power of the sun during the night, and your lights still need a power source.

Do solar garden lights need batteries?

In conclusion, solar garden lights need batteries to work during the night because solar panels cannot produce electricity without direct sunlight. During the day, solar panels generate electricity and store it in batteries. Just as with any other gadget or appliance, your solar lights need a source of power to work.

What kind of battery do solar lights use?

While there are a lot of different battery types out there to pick and choose from powering solar lights today, the most popular options are definitely nickel-metal hydride and nickel-cadmium options. Both of these batteries have significant advantages over the older, out-of-date lead acid-style batteries that they replaced.

Do solar lights & batteries need a protection circuit?

When you're talking about solar lights and batteries that are going to be left out in direct sunlight all day long, for days on end, you're going to experience higher temperatures and lithium-ion degradation. On top of that, these batteries can be pretty fragile and necessitate the use of their very own protection circuit.

Should I charge my solar lights with a charger?

Using a charger is helpful if your lights have limited access to the sun or if they have been in storage. The only times there may be an exception is if your solar lighting has a sealed battery pack...this is rare but can happen.
