

Why does the energy storage time of military watches is short

Why are military watches so rare?

There's a common misconception and assumption, just because the watches are specified, procured and in the DLA supply system for the military services that they're handed out to US Armed Forces personnel like Halloween candy. The US Armed Forces issuing a watch to any service member of any rank is exceptionally rare.

Why should you buy a military watch?

The selection caters to various needs, ensuring everyone finds a watch that suits their requirements, whether for rugged outdoor use or more general purposes. Military personnel and serious outdoorsman know that the time to acquire and prepare gear is long before setting out on a hike or mission.

Why are military style watches thicker than normal?

Generally, military style watches will be thicker than normal due to their excessive functions and tools, so plan ahead and perhaps buy a separate watch for pairing in formal attire. As a last sizing matter, the band's size should be carefully considered.

When was the last time a military watch was made?

The last official issued watch spec from the US Govt. was sometime in the 1980's, since that time watches are bought at the soldier's discretion. Many servicemen buy G-shock's or similar digital multi function watches. Officially - Marathon do supply watches to the US Military but it is on a limited contract basis.

What makes a good vintage military watch?

First military watch brands were resistant to water and dust, as water and dust were the nemeses of traditional pocket watches. The Second World War broke out, governments officially issued the best vintage military watches with specific standards like accurate jewel movements and luminous dials.

Is a G-Shock a good military watch?

This particular model is one of the cheapest models you'll find that is worth owning as a military watch. All G-Shocks, so long as they aren't knockoffs (very common, beware) are incredibly tough and have a very fair warranty. One of the first things you'll notice about this watch is the nifty little bull bars wrapping around the face of the watch.

Knowing that quartz watches are far more accurate than mechanical watches might make you wonder why anyone would ever buy the latter. Well, the loss of a few seconds in a day isn't going to affect most people's lives much, especially if you take the time to rewind your watch ...
