

Why the energy storage business park is strong

Should energy storage be developed?

Developing energy storage has become a global consensus. It was announced at COP29 in late 2024 that global storage capacity will increase to 1,500 GW by 2030, more than six times the 2022 level. As a result, InfoLink maintains a cautiously optimistic outlook for the medium- to long-term development of energy storage systems.

How can big data industrial parks improve energy storage business model?

Combined with the energy storage application scenarios of big data industrial parks, the collaborative modes among different entities are sorted out based on the zero-carbon target path, and the maximum economic value of the energy storage business model is brought into play through certain collaborative measures.

How can energy storage benefits be improved?

By adjusting peak and valley electricity prices and opening the FM market, energy storage benefits can be greatly improved, which is conducive to promoting the development of zero-carbon big data industrial parks, and technical advances are beneficial for reducing investment costs.

Is energy storage a good idea?

Major industrial companies consider storage a technology that could transform cars, turbines, and consumer electronics (see sidebar, "What is energy storage?"). Others, however, take a dimmer view, believing that storage will not be economical any time soon. That pessimism cannot be dismissed.

What drives energy storage project development?

Globally, energy storage project development is increasingly driven by the utility-scale segment, with mandates and targeted auctions driving gigawatt-hour projects in markets like China, Saudi Arabia, South Africa, Australia and Chile.

Why do companies invest in energy-storage devices?

Historically, companies, grid operators, independent power providers, and utilities have invested in energy-storage devices to provide a specific benefit, either for themselves or for the grid. As storage costs fall, ownership will broaden and many new business models will emerge.
